Ronny Gutierrez Vitola

Innovative Full Stack Developer & Cloud Enthusiast

Profile

As a FullStack Developer, I am currently focused on deepening my knowledge of AWS cloud services through specialized training and certification programs offered by AWS Skill Builder. My skill set includes frameworks such as Laravel, Node.js/NestJS, and Vue/React, along with tools such as State Managers, Tailwind CSS, Bootstrap, and TypeScript to create responsive and efficient user interfaces. I am proficient in backend development with SQL and NoSQL languages/technologies. I also have knowledge of Linux fundamentals and good experience with Git, Docker, Jenkins, GitHub Actions, and CI/CD workflows.

I currently work at Kiki Logistics but I am open to new job opportunities.

I have been working in the tech industry since 2018, holding multiple development positions both as a game developer and full stack developer at IT companies such as WeDo 3D and Biinyu Games S.A.

Featured own Projects:
Entre Cuentos - I was the winner of the Crea Digital 2019 contest of the MinTIC with Biinyu Games for the development of this video game that brought children closer to reading children's stories by Colombian writers such as Rafael Pombo.

We Do 3D - As co-founder of this entrepreneurship, we obtained recognition as the Entrepreneurship with the Greatest Traction, generating sales in the first quarter of 2015 worth USD $34.000.

Experience

Full Stack Developer at Kiki Logistics, Cartagena

February 2025 – Present
Hybrid

I am currently working on a logistics services technology platform that is driving the expansion of ex-Latam companies into markets across the region. From a technical perspective, I work with Hexagonal Architecture and Domain Driven Design (DDD), applying software design patterns such as Strategy, Singleton, Factory Method, Builder, among others. The solution is designed for real-time data monitoring, and the project has contributed to organizational improvements, reduction of overhead costs, resource optimization, and enhanced decision-making at the managerial level, significantly impacting production efficiency, document workflows, and reporting processes.

Responsabilities:

- Maintain the project's core structure (Frontend and Backend).
- Propose scalable and maintainable solutions according to assigned tasks and project structures.
- Actively participate following the SCRUM methodology.
- Maintain constant communication with early users to gather feedback and define future features.
- Take part in code reviews and retrospectives with the purpose of continuous improvement.

Tech Stack:
NestJS 11.1.3+, TypeScript 5.5+, HTML5, JavaScript ES6, CSS3+, Node.js 16+, React 18+, Material UI, Redux Toolkit, Zustand, TailwindCSS 4.*, PostgreSQL 17+, MongoDB 5.*, *Redis 7.**, Docker 27+, Jira.

Development Tools:
Code & Repositories: Git, GitHub, Bitbucket, Visual Studio Code, Cursor, Windsurf, Antigravity.
Testing: Jest.
Design: Figma.
References: Stack Overflow, Morioh, YouTube.
AI Tools: Claude, GitHub Copilot, ChatGPT, Deepseek, LLM's, MCP.

Full Stack Developer at COTECMAR, Cartagena
June 2023 – February 2025
Hybrid

I actively participated in a production software project that increased efficiency in personnel planning and production cost management. My role is to develop and refine features that streamline scheduling, improve resource allocation, and provide insights for cost optimization. By implementing solutions to monitor data in real-time, the project has helped the organization reduce overhead, optimize resources, and improve decision making at the management level, impacting production efficiency, document processes, and reporting by 80%.

Responsabilities:

- Define the project core structure (Frontend and Backend).
- Define the Tech Stack that allows us to scale quickly but without affecting our premise of launching weekly releases.
- Define the UI Guideline's Design System and UI Kit on Figma.
- Constant communication with the early adopters to receive their feedback and define future features.
- Implement queues, notifications, email automation, and broadcast web sockets systems.

Tech Stack:

Laravel 10+, Vue.js 3.1+, Vuex/Pinia 2+, TypeScript 5.5+, HTML5, Javascript ES6, CSS3, PHP 8+, Astro 3, Nodejs 18+, React 18+, TailwindCSS 3.1+, SQLServer 19, Ubuntu, Docker 27+, Jenkins 2.4+

Development Tools:

Code & Repositories: Git, GitHub, GitLab, Visual Studio Code, Cursor, Windsurf, Insomnia, DBeaver.
Testing: Jest, Cypress.
Design: Figma, Adobe Illustrator, Canvan.
References: Stack Overflow, Morioh, YouTube.
AI Tools: GitHub Copilot, ChatGPT, Deepseek, LLMs, MCP.

Lead Engineer at Biinyu Games, Cartagena
February 2018 – February 2021
On-site

I was in charge of the development of videogame mechanics and programming of interactive platforms such as AR and VR applied to different sectors of the economy such as construction, education, tourism, environment, health, among others, generating quality interactive content for some of the most important digital platforms such as PC / Linux / Mac, Android and iOS, using the Unity video game engine as a main tool.
I also held a personnel leadership position and stood out in the company for my employee management, organization and results orientation.

Responsabilities:

- Participation in the entire production process of a video game and creation of GDD's.
- Programmed and implemented interactive mechanics for AR (Augmented Reality) and VR (Virtual Reality) platforms.
- Developed interactive applications and games compatible with multiple platforms including PC, Linux, Mac, Android, and iOS.
- Produced high-quality interactive content for prominent digital distribution platforms, ensuring industry standards and user engagement.
- Held a leadership role, effectively managing personnel and fostering team collaboration to meet organizational objectives.
- Excelled in organizational and results-oriented tasks, ensuring successful delivery of projects while maintaining quality and efficiency.

Tech Stack:
Unity 2019+, HTML5, CSS3, Javascript, C# 7.3+, PHP 7.0, MySQL, Vuforia AR, Occulus and HTC VR SDK's

Development Tools:
Code & Repositories: Git, GitHub, Microsoft Visual Studio, MySQL Workbench
Design: Photoshop CC 2018, Illustrator CC 2018, After Effects CC 2018, Premier CC 2018
References: Stack Overflow, Youtube, Unity Learn

Education

System Engineer, Universidad San José
Bogotá, Colombia

February 2022 – Present

3D Animation Technologist, SENA, Colombia

Febrero 2012 – Diciembre 2014

Cloud Architecture with AWS, Universidad Tecnológica de Bolívar

September 2024 – December 2024

Comprehensive course designed to master cloud architecture and deployment of solutions on AWS. Covered topics include:

- **Cloud Architecture Fundamentals:** Scalable design, high availability, and cost optimization.
- **Core AWS Services:** Configuration and management of EC2, Virtual Private Clouds (VPC), storage with S3, relational databases with RDS, NoSQL with DynamoDB, and content distribution with CloudFront.
- **CI/CD Automation:** Implementation of pipelines using GitHub Actions for Continuous Integration and Continuous Deployment workflows.
- **Infrastructure as Code (IaC):** Use of CloudFormation and Terraform to manage and version AWS resources.
- **Best Practices:** Security with IAM, monitoring and alerts with CloudWatch, and load balancing with ELB.
- **Practical Application:** Development and deployment of a full stack project using Node/Express, React, and MySQL, leveraging AWS free tier services and the tools mentioned above.

Scrum Fundamentals Certified (SFC)
